

MAJED SALIOU AZAR

AI Engineer | LLM Applications, RAG and Model Fine-Tuning

Lomé, Togo | Remote worldwide | UTC+0 | +228 93 55 51 57 | majed.azar7@gmail.com

linkedin.com/in/azarmajed | github.com/MidlightDDK | midlightddk.github.io

PROFESSIONAL SUMMARY

Software engineer with 4+ years of professional experience and an MSIT, targeting AI Engineer roles. Built and deployed RAG, tool-calling agent, and LoRA fine-tuning projects, each with held-out evals, live demos, and CI gates.

TECHNICAL SKILLS

Languages: Python, TypeScript, SQL, C#

AI and ML: PyTorch, Hugging Face Transformers, PEFT, TRL, LoRA, LLM APIs, prompt engineering, embeddings, vector databases, hybrid search, tool calling, model evaluation, ONNX, quantization

Engineering: FastAPI, Docker, GCP, DuckDB, React, Cloudflare Workers, WebGPU, WebAssembly, Git, GitHub Actions, pytest, Playwright, CI/CD

AI ENGINEERING PROJECTS

FilingLens | RAG for SEC Filings | Live demo | Code

- Built citation-grounded Q&A over 24 SEC filings from 12 companies using Python ingestion, structure-aware chunking, BM25, dense embeddings, and Reciprocal Rank Fusion.
- Achieved 85.5% recall@10 on 74 held-out retrieval items and 82.9% answer accuracy on a 35-question test sample; added citation checks, abstention, and CI regression gates.

Browser Analyst | Tool-Calling Data Analysis Agent | Live demo | Code

- Built an agent that executes SQL and Python through DuckDB-WASM and Pyodide, repairs tool errors, generates charts, and verifies answer numbers against result cells.
- Reached 94% task success on a project benchmark of 100 questions across 10 categories; added reproducible traces, token tracking, and CI evaluation gates.
- Implemented read-only SQL guards, approval before Python execution, and CSP network restrictions; tested defenses using prompt-injection and scripted hijack cases.

PocketSQL | Fine-Tuned Text-to-SQL Model | Live demo | Code

- Fine-tuned Qwen2.5-Coder-0.5B with LoRA using PyTorch, TRL, and PEFT on 7,376 Spider training pairs plus 591 execution-filtered synthetic examples.
- Raised execution accuracy from 30.9% to 49.3% on 981 DuckDB-converted Spider-dev questions, comparing base and fine-tuned models in the same 4-bit ONNX runtime.
- Exported a 276 MiB model for offline WebGPU inference with a WASM fallback; added artifact evaluation, release gates, and real-model offline end-to-end tests.

PROFESSIONAL EXPERIENCE

Software Engineer (Unity, C#) | Terahard Ltd | London, UK (Remote) | July 2022 - Present

- Develop and maintain C# systems for commercial PC and mobile games, including Monster Mop Up (published by Yogscast Games), Dunebound Tactics, and the upcoming RuneSmith.
- Deliver features from requirements through testing, optimization, and release, and resolve performance and integration issues in production code, working remotely with design, art, and QA.
- Use Claude Code and OpenAI Codex daily, verifying AI-generated code through review and testing.

EDUCATION AND ADDITIONAL INFORMATION

Master of Science in Information Technology | University of the People (WSCUC-accredited) | 2026 | GPA 3.56/4.0

Bachelor of Computer Science | ESGIS, Togo | 2018 – 2021 | Average 15.85/20

Dev Champion 2022 competitive programming: 5th in Africa, 2nd in Togo | English and French: native or bilingual
